NTT DATA

NTT DATA welcomed Dell Services into the family in 2016. Together, we offer one of the industry's most comprehensive services portfolios designed to modernize business and technology to deliver the outcomes that matter most to our clients.

Meet Unpredictable Business Demands With On-Demand Private Cloud Capacity

Utility Zone for NTT DATA Dedicated Cloud

NTT DATA Services
formerly Dell Services

Scale up when you need more capacity — for as long as you need it — and pay only for what you use

In this fast-moving digital era, IT departments are expected to quickly and easily scale resources to keep up with unpredictable business demands. But ensuring capacity requirements are met for shorter durations can be difficult.

Utility Zone, an on-demand private cloud infrastructure-as-a-service (IaaS), enables you to scale up or down as needed — allowing you to pay only for what you use.

Utility Zone provides on-demand access to our Dedicated Cloud infrastructure and is ideal if you're an existing or new NTT DATA Dedicated Cloud client who's looking to:
- Deploy temporary, project-based workloads
- Implement development, test and quality assurance workloads
- Burst workloads from private clouds during peak consumption (for example, seasonal peaks in website traffic)

Deployed in the same data center and network as our Dedicated Cloud infrastructure, Utility Zone is designed for non-persistent workloads and not recommended for persistent, storage-intensive workloads. Utility Zone helps optimize data center-related spending — you can even turn off the environment when compute resources are not needed.

Key benefits:
- **On demand:** Provides extra private cloud capacity for your temporary or seasonal workloads
- **Agility and scalability:** Add or subtract Utility Zone infrastructure on demand with our Cloud Management Platform
- **High availability:** Supported by enterprise-grade availability service-level agreements (SLAs) — no matter your existing architecture
- **Robust security and compliance:** Enjoy the security and reassurances of a private cloud solution in a public cloud consumption model

Utility Zone provides:

- The same level of superior security and compliance you've come to expect with our Dedicated Cloud service
- 99.95% availability, with associated SLAs
- The ability to run unmodified legacy applications
- The ability to run temporary or seasonal workloads in the same data center

Utility Zone is offered as an add-on to NTT DATA Dedicated Cloud

The platform can only be purchased if you're an existing Dedicated Cloud client or you intend to purchase NTT DATA Dedicated Cloud. Existing Dedicated Cloud clients must satisfy the following pre-requisites:

- In order to use Utility Zone, you must also have the Cloud Management Platform add-on to Dedicated Cloud. Cloud Management Platform is used to add and remove Utility Zone infrastructure through a self-service interface. NTT DATA will build and maintain the blueprints, catalog items and workflows required to support Utility Zone service.
- You must have a dedicated vCenter environment with a minimum of ten server blades deployed in order to use Utility Zone.

About NTT DATA Dedicated Cloud

Dedicated Cloud is an IaaS offering designed to provide a secure private cloud environment, hosted and managed by NTT DATA. It offers more flexibility than public cloud by enhancing your ability to operate production workloads, which might otherwise be limited to custom, on-premises operations in a hosted, secured private cloud.

Service details and options	
Pricing granularity	Daily for blades and virtual machines (VMs) Monthly for storage
Dedicated compute	Included
High availability (minimum two blades deployed)	Included
99.95% availability SLA	Included
The same security and compliance as defined for Dedicated Cloud	Included
VM profiles	Client defined
Access to our existing Cloud Management Platform blueprints and workflows	Included
