

NTT DATA

NTT DATA welcomed Dell Services into the family in 2016. Together, we offer one of the industry's most comprehensive services portfolios designed to modernize business and technology to deliver the outcomes that matter most to our clients.

Reduce Costs and Deliver Innovation on the Microsoft Azure Platform

NTT DATA Cloud On Demand with Microsoft Azure

NTT DATA Services
formerly Dell Services

Cloud solutions powered by Microsoft Azure

As a leading cloud platform, Microsoft Azure provides services to build and run any application in the cloud. Azure gives you the flexibility to move existing workloads or develop new applications using the language and platform of your choice, making data storage, backup and recovery more efficient and economical. It's also easier to build applications that span both on-premises and the cloud. You get the best of cloud computing — a flexible, reliable platform hosted in your data center, Microsoft's secure data centers or a combination of both.

Get freedom of choice with our vast cloud partner ecosystem

NTT DATA takes the uncertainty out of the cloud with a client-centric approach to help your organization take full advantage of the cloud. Whether you need a developer-friendly public environment, a mission-critical single-tenant private cloud or a colocation solution, our partner ecosystem combined with NTT DATA expertise provide a wide range of solutions to choose from — all delivered on a single invoice. NTT DATA blends intellectual property with a wide range of partner technologies to deliver unique, optimal performance based on your application needs and the business outcomes you demand. This means simple purchase logistics, uncomplicated vendor relationships and the confidence of NTT DATA services and support, whether you have one cloud platform or many.

 **Windows Azure**

Key benefits:

- Improve business agility with a robust end-to-end portfolio
- Take advantage of proven industry expertise
- Enable a simple, unified experience
- Increase productivity
- Reduce costs
- Unlock potential to deliver IT innovation

Comprehensive application consulting

NTT DATA has developed a portfolio of services and tools to enable the enterprise cloud with solutions tailored to meet your unique goals and requirements. To build or migrate applications in Azure, our full suite of services include:

Transformation services

- Understand the benefits of cloud and identify applications best suited for Azure
- Move workloads, migrate existing applications and extend on-premises applications
- Convert and deploy legacy applications on Azure

Development services

- Design, develop, integrate and test public, private or hybrid clouds
- Custom applications
- Deploy or re-deploy packaged applications in a public, private or hybrid model

Management services

- Support cloud deployments with a global help desk, self-service portal and a dedicated team
- Manage cloud deployments with robust protection

Microsoft's Azure platform

What is Azure? In short, it's Microsoft's cloud platform: a growing collection of complementary services — compute, storage, data, networking, and app — that help you move faster, get more done and save money.

Key use cases:

Web applications

Build anything from light-weight websites to multi-tier cloud services that scale up as your traffic grows.

Cloud storage

Rely on geo-redundant cloud storage for backup, archiving and disaster recovery.

Big data and HPC

Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

Mobile

Accelerate your mobile app development by using a backend hosted in Windows Azure. Scale instantly as your install base grows.

Media

Create, manage and distribute media in the cloud - everything from encoding to content protection to streaming and analytics support.

Flexible application model

Windows Azure provides a rich set of application services, including SDKs, caching, messaging and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby or using open REST protocols.

This is all part of our promise to let you build using any language, tool or framework.

Always on, always here

Build resilient applications with automatic OS and service patching, built in network load balancing and geo-redundant storage. We also proudly deliver a 99.95% monthly SLA. You can rely on our decades of experience in data center operations and trust that everything we offer is backed by industry certifications for security and compliance.

Data center without boundaries

We make it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Windows Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Windows Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with System Center.

Global reach

With data centers around the globe, a massive investment in data center innovation and a worldwide Content Delivery Network, you can build applications that provide the best experience for your users wherever they are.

Meet business needs and address technology challenges

Our consultants can help you envision, enable and execute your journey to the cloud. We can provide:

- Assistance at all stages of the cloud adoption lifecycle, from initial concept through development and testing, and management and support
- Flexible and scalable solutions, utilizing existing infrastructure investments and application integrations
- Solution centers to help you explore performance, security, governance and other cloud considerations
- Skilled, dedicated professionals who specialize in Windows Azure deployments
- Proprietary tools for monitoring, scaling, notifications, security, software-as-a-service enablement, data management and other key enterprise cloud management functions
